## PSH 35/1

Compact size

Tilting range $35 \mathrm{mrad}\left(2^{\circ}\right)$

Sub-urad resolution

## 1.2 kHz resonant frequency

The piezo mirror positioner PSH 35 was developed for the dynamic motion of small mirrors. The construction design makes it possible to reach a tilting angle of 35 mrad. It can easily be integrated into more complex stages because of its compact size.

The PSH 35 mirror positioning element can be driven by any of the power supplies from piezosystem jena. We recommend a maximum operating voltage of 100 V for permanent work under OEM conditions.

The element is normally delivered without a mirror. A mirror can be attached by gluing.

Variants:

- With strain gauge (SG)

## Recommended Controller:

NV200/D Net

## Applications

- Laser Alignment
- Scanning Systems
- Laser Beam Stabilization • Laser Beam Metrology
